Go Green...

Our Nature Series of Architectural Signage combines the strength and durability of extruded aluminum structures with the appeal, beauty and detail of textures found in nature. Our DSG (Dye-Sublimation Green) finishing system uses a patented process that produces aluminum sign components (75% recycled material) with richly detailed, exterior-grade subsurface treatments that replicate authentic looking wood grain, marble, granite, and more. Unlike paint or vinyl, these long-life finishes produce an extremely durable, realistic, color-fast replication of nature's own art.

- High Definition Photographic Textures
- Corrosion Resistant
- Chemical and Abrasion Resistant
- Resists Chipping, Peeling, Cracking and Fading
- Unaffected by Humidity
- Graffiti Resistant...easily cleaned of indelible marker and spray paint

In imitating nature with aluminum we conserve our natural resources, preserve our environment, reflect its beauty, and provide durable lasting signs with many years of optimum appearance and color consistency.
